PERCENT: 62.80

PROFILE

B.Tech Computer Science Engineering student specializing in Data Science, with strong analytical skills and hands-on experience in Python, web development (HTML, CSS, JavaScript, React), and data visualization using tools like Matplotlib and Power BI..

PROJECT

Personal Portfolio

- Technologies: HTML, CSS, JavaScript, React (or whatever you used)*
- Designed and developed a responsive portfolio website to showcase academic projects, technical skills, and achievements.
 - Implemented interactive UI components and optimized performance for smooth user experience across devices.
 - Integrated project descriptions, GitHub repositories, and contact information to create a professional online presence.

Personalized Career Adviser System

- Designed and implemented a data-driven career recommendation system that provides personalized guidance based on user profiles, academic performance, and skill sets.
- Applied machine learning algorithms (e.g., decision trees, clustering, recommendation models) to match individuals with suitable career paths and learning resources.

Café Sales Data Analysis

This project involved analyzing sales data from a café to uncover key business insights. Using tools like Python, Pandas, and Matplotlib, I performed data cleaning, exploratory data analysis (EDA), and visualizations to identify trends in customer behavior, peak sales periods, and top-selling items. The analysis helped in understanding revenue patterns, optimizing inventory, and making data-driven decisions to improve overall business performance.
